Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lee et al (6,862,223). The reference to Lee teaches the basic structure of a byte-alterable memory array having a select gate device which is integrated with a split-gate memory cell, and where the gate of the select gate MOSFET is controlled independently from the gate of the split-gate memory cell, as claimed. See, for example, the representative array depicted in FIG. 17 of Lee, where word lines are tied to the gates of the split-gate memory cell, and source lines are tied to the sources of the select gate MOSFET devices. In addition, bit lines may be tied to the drains of the split-gate memory cell, and select lines may be tied to the select gates of the select gate MOSFET devices.

The claimed voltage schemes are also within the scope of this reference, which also utilizes such well known structures as silicon dioxide dielectrics.
